---

## Panelists

**Gayle Balba**  
**Henry Masur**  
**Roy Gulick**  
**Poonam Mathur**  
**R. Douglas Bruce**

IAS-USA

---

---

---

---

---

---

---

## Learning Objectives

After attending this presentation, learners will be able to select antiretroviral therapy in patients who:

- Are starting initial therapy
- Have persistently low-level viremia
- Have a baseline M184V mutation
- Are pregnant
- Are eligible for PrEP

Slide 4 of 70

---

---

---

---

---

---

---

### Question

Seems like we are now starting ARV therapy for about everyone, what about starting therapy immediately at time of diagnosis?

Slide 5 of 70

---

---

---

---

---

---

---

### Case 1

- 30 yo Female was diagnosed with HIV infection 4 hours ago in the ER
- Asymptomatic
- **Initial:** HIV RNA *pending*  
CD4 count *pending*
- Other labs are normal; HLA-B57 *pending*
- Genotype is *pending*
- No prior medical history.
- Ok to start therapy if you think she should

Slide 6 of 70

---

---

---

---

---

---

---

### ARS 1: When would you choose to start therapy?

1. Right now in the ER
2. Within 1 - 2 days (outpt Clinic)
3. In the next 2 weeks (outpt Clinic)
4. Within 2 – 4 weeks
5. Some other option

Slide 7 of 70

---

---

---

---

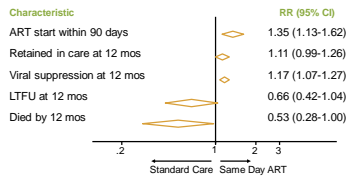

---

---

---

## Improved Clinical Outcomes With Rapid ART Initiation

- Universal recommendations for treating all HIV-infected persons
- Systematic review of 22 studies of rapid ART initiation (including 4 RCTs)

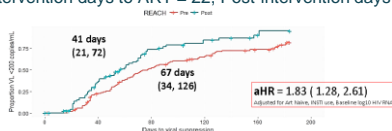

Slide 8 of 70

Ford N, et al. AIDS. 2018;32:17-23.

## Expedited ART– Experience in Atlanta

- Grady reduced barriers, with goal to begin ART within 72hrs
- Pre-intervention days to ART = 22, Post-intervention days to ART= 4.

Outcomes	Pre-REACH (n=117)	Post-REACH (n=90)	aOR (95% CI)
Attended 1 <sup>st</sup> scheduled appointment <sup>†</sup>	85 (73)	73 (81)	1.63 (0.82, 3.22)
Achieved viral suppression <sup>‡</sup>	87 (74)	61 (68)	0.77 (0.39, 1.52)

<sup>†</sup>Adjusted for age, race, sex and being ART Naïve

<sup>‡</sup>Adjusted for age, race, baseline HIV RNA & INSTI use

Colasanti #1109

Slide 9 of 70

## Question

What regimen should I use as initial therapy?

Slide 10 of 70

## Case 2

- 48 yo Male presents with newly diagnosed HIV infection
- Asymptomatic
- **Initial:** HIV RNA 28,000 c/ml  
CD4 count 650 cells/ul
- Other labs are normal; HLA-B57 positive
- Genotype is Wild-type virus
- No prior medical history. Normal renal function
- Ok to start therapy if you think he should

Slide 11 of 70

---

---

---

---

---

---

---

---

## ARS 2: At this point which regimen would you choose?

1. TDF / 3TC / low dose (400mg) EFV (fdc; generic)
2. ABC/ 3TC / DTG (fdc)
3. TAF/ FTC (fdc) + DTG
4. TAF / FTC/ ELV / coBI (fdc)
5. TAF/ FTC / BIC (fdc)
6. TAF / FTC (fdc) + RAL (once daily)
7. TAF / FTC / RPV (fdc)
8. TAF/ FTC (fdc) + DRV/r (or coBI / fdc)
9. Some other option (e.g., DRV/r + DTG or ...)

## Recommended Initial Regimens: INSTI Plus 2 nRTIs

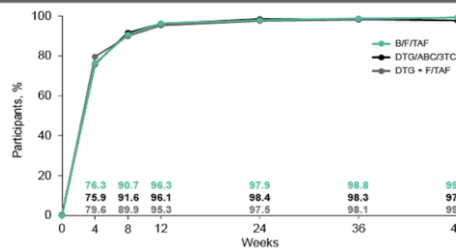

- Bictegravir/TAF/emtricitabine
- Dolutegravir/abacavir/lamivudine
- Dolutegravir plus TAF/emtricitabine

Slide 14 of 70

Saag, Bozzette, Gandhi, et al. 2016, 2018

### Virologic Response by Visit (FAS)

HIV-1 RNA <50 copies/mL, Missing=Excluded Analysis

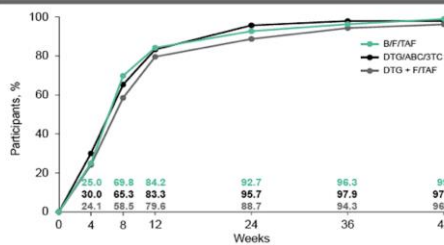

Slide 15 of 70

2018 TAF, 20-23 July 2018, Amsterdam, Netherlands

### Virologic Efficacy:

HIV-1 RNA <50 copies/mL, Missing=Excluded Analysis  
Baseline HIV-1 RNA >100,000 copies/mL

Slide 16 of 70

## Recommended Initial Regimens: If an InSTI Is Not Available

- Darunavir/cobicistat/TAF (or TDF)/emtricitabine\*
- Darunavir boosted with ritonavir plus TAF (or TDF)/emtricitabine
- Efavirenz/TDF/emtricitabine
- Elvitegravir/cobicistat/TAF (or TDF)/emtricitabine
- Raltegravir plus TAF (or TDF)/emtricitabine
- Rilpivirine/TAF (or TDF)/emtricitabine (if pretreatment HIV RNA level is <100,000 c/mL and CD4 cell count is >200/μL)
- Fixed-dose Dor/TDF/3TC tablet approved July 2018

Slide 17 of 70

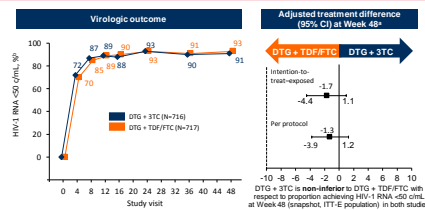

Seung, Brannon, Gordin, et al. 2018, 2018

## ARS 3: Would you use DTG / 3TC as initial therapy?

1. Yes
2. No
3. Not sure

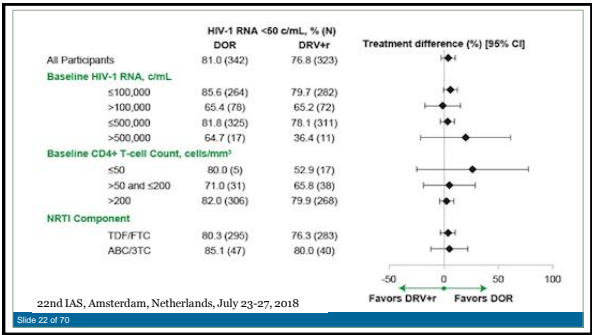

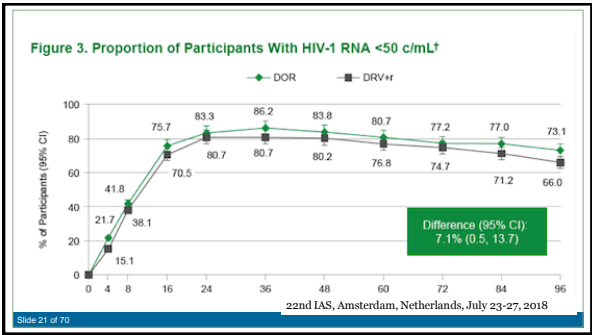

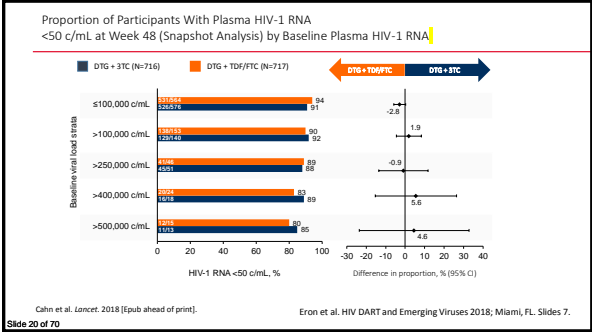

Slide 18 of 70

## Gemini Studies: DTG plus 3TC vs. DTG plus TDF/FTC in Treatment Naïve patients.

Slide 19 of 70

Cahn et al. Lancet. 2018 [Epub ahead of print].  
Eron et al. HIV DART and Emerging Viruses 2018; Miami, FL. Slides 7.

ARS 4: Which ARV drug is most likely to cause a 0.1 mg/dl jump in serum creatinine 1 week after starting Rx?

1. Bictegravir
2. Tenofovir DF
3. Tenofovir AF
4. Atazanavir
5. Emtricitabine

Slide 23 of 70

---

---

---

---

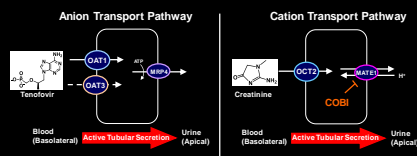

---

---

---

---

### Tenofovir and COBI Interact with Distinct Renal Transport Pathways

- The active tubular secretion of tenofovir and the effect of COBI on creatinine are mediated by distinct transport pathways in renal proximal tubules

Ray A, et al. Antimicrob Agents Chem 2006;32(7):3304  
Lipinski E, et al. ICAAC 2011; Chicago. #A1-1724

Slide 20 of 70

---

---

---

---

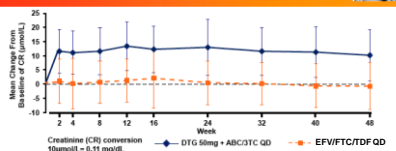

---

---

---

---

### Renal Safety

**Urine albumin/creatinine**  
Median change (GFR) from baseline (mg/minol CR) to Week 48

Treatment Group	Median change (GFR) from baseline (mg/minol CR) to Week 48
DTG 50 mg+ABC/3TC QD	0.00 (-0.30, 0.30)
EPV/FTC/TDF QD	+0.05 (-0.20, 0.30)

- Small increase in creatinine due to blockade of Cr secretion<sup>1</sup>
- DTG does not affect actual glomerular filtration rate (GFR)<sup>1</sup>

1. Howell J, et al. Br J Clin Pharmacol. In press 2012 Aug. Washington L, et al. J Natl (NBA) 16:12 Sept 2012. Abstract 16.543.

Slide 25 of 70

---

---

---

---

---

---

---

---

### Question

Seems like we are now starting ARV therapy for about everyone, what about starting therapy for an **Elite Controller**?

Slide 26 of 70

---

---

---

---

---

---

---

### Case 3

- 30 yo Male was diagnosed with HIV infection 4 years ago
- Asymptomatic
- **Initial:** HIV RNA < 50 c/ml (HIV DNA positive)  
CD4 count 870 cells/ul
- Other labs are normal; HLA-B57 neg
- Genotype determined from DNA is wild-type
- No prior medical history.
- Ok to start therapy if you think he should

Slide 27 of 70

---

---

---

---

---

---

---

### ARS 5: Would you choose to start therapy at this time?

1. Yes
2. No
3. Maybe

Slide 28 of 70

---

---

---

---

---

---

---

### Question

Should I change a regimen when low level detectable virus is present?

Slide 29 of 70

---

---

---

---

---

---

---

### Case 4

- 55 yo male referred to you for evaluation
- Diagnosed 18 years ago with HIV infection
- **Initial:** HIV RNA 936,000c/ml  
CD4 count 70 cells/ul
- **Current:** HIV RNA 85 c/ml (prior value 62 c/ml)  
CD4 count 525 cells/ul
- Started on NEL/D4T/3TC; subsequently treated with
  - LOP-r / TDF/FTC,
  - EFV/ FTC/ TDF (fdc).
  - Now **DTG / DRVc / 3TC**
- No historical resistance tests are available

Slide 30 of 70

---

---

---

---

---

---

---

### ARS 6: Should you change ARV therapy now?

1. Yes
2. No
3. Not sure

Slide 31 of 70

---

---

---

---

---

---

---

## Virologic Failure, Low Level Viremia, and Blips

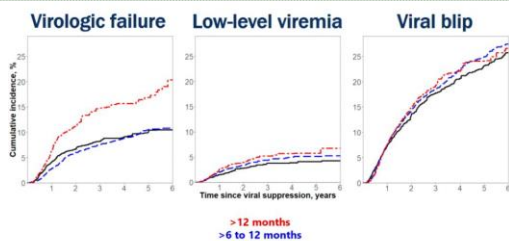

### Clinical characteristics

	≤ 6 months n=5,776	> 6 to 12 months n=6,858	> 12 months n=4,360
Pre-ART viral load median	28000	62457	82713
Year of ART initiation median	2011	2011	2011
ART anchor drug(s)			
NNRTI	40%	50%	46%
PI	32%	36%	45%
InSTI	31%	16%	13%
CD4 count, cells/μL median	440	460	460
AIDS diagnosis	12%	14%	20%
Hepatitis B co-infection	3%	4%	5%
Hepatitis C co-infection	10%	9%	15%

Slide 32 of 70

Lee, J et al. NA-ACCORD, CROI 2019. Abstr #97

## Virologic Failure, Low Level Viremia, and Blips

Slide 33 of 70

Lee, J et al. NA-ACCORD, CROI 2019. Abstr #97

## Question

What regimen should I use as initial therapy in a women who desires to become pregnant?

Slide 34 of 70

### Case 5

- 30 yo Female who is on ARV Rx informs you she'd like to become pregnant HIV infection
- Asymptomatic; No prior medical history.
- **Initial:** HIV RNA 28,000 c/ml  
CD4 count 650 cells/ul
- Other labs are normal; HLA-B57 neg
- Pre-Rx genotype is Wild-type virus
- She is currently on DTG / ABC / 3TC (fdc) with undetectable HIV RNA

Slide 35 of 70

---

---

---

---

---

---

---

---

### ARS 7: At this point you would

- A. Keep her on her current Rx (ABC/ 3TC / DTG)
- B. Switch her to TDF / FTC / EFV (fdc)
- C. Switch her to TAF / FTC/ ELV / co bi (fdc)
- D. Switch her to TDF / FTC / RPV (fdc)
- E. Switch her to TDF/ FTC (fdc) / DRV/r
- F. Switch her to TAF/ FTC / ATV/r
- G. Switch her to TDF / FTC / ATV/r
- H. Some other option

Slide 36 of 70

---

---

---

---

---

---

---

---

### TAF PK - Fetus

- Intracellular concentration of Tenofovir-DP is 4-5 times higher for TAF compared to TDF
- Does this expose the fetus to a higher risk of birth abnormalities?
- Does this lower the risk of vertical transmission?

Andrew Hill, 2016 WHO meeting

Slide 37 of 70

---

---

---

---

---

---

---

---

---

---

---

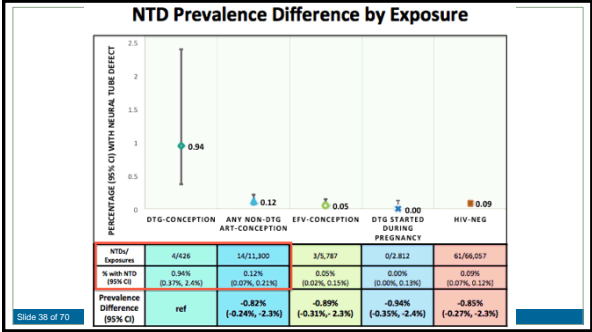

---

---

---

---

---

---

---

---

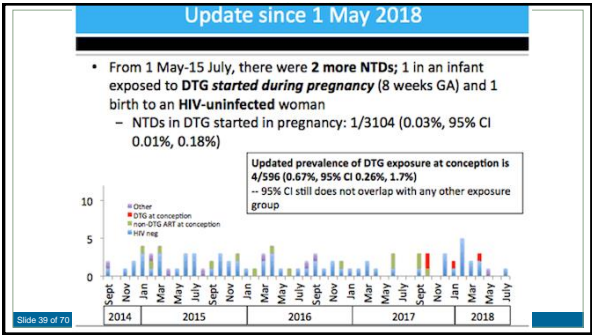

---

---

---

---

---

---

---

---

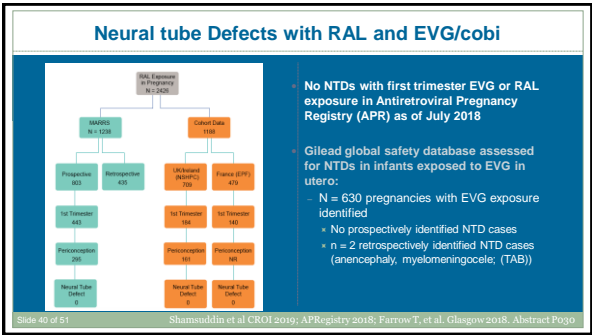

---

---

---

---

---

#### ARS 8: Can she breastfeed if VL undetectable (U=U)?

1. Yes
2. No
3. I don't know

Slide 41 of 70

---

---

---

---

---

---

---

#### Question

What regimen should be used as initial therapy when an M184V mutation is present?

Slide 42 of 70

---

---

---

---

---

---

---

#### Case 6

- 30 yo Female presents with newly diagnosed HIV infection
- Asymptomatic
- **Initial:** HIV RNA 128,000 c/ml  
CD4 count 350 cells/ul
- Other labs are normal; HLA-B57 neg
- Genotype shows **M184V and K103N mutation**
- No prior medical history. No children. Does not plan to become pregnant.
- Ok to start therapy if you think she should

Slide 43 of 70

---

---

---

---

---

---

---

### ARS 9: At this point which regimen would you choose?

- A. TDF / 3TC / low dose (400mg) EFV (fdc; generic)
- B. DTG / 3TC (fbc)
- C. ABC/ 3TC / DTG (fbc)
- D. TAF/ FTC (fbc) + DTG
- E. TAF / FTC/ ELV / cobi (fbc)
- F. TAF/ FTC / BIC (fbc)
- G. TAF / FTC (fbc) + RAL (once daily)
- H. TAF / FTC / RPV (fbc)
- I. TAF/ FTC (fbc) + DRV/r (or cobi / fbc)
- J. Some other option (e.g., DRV/r + DTG or ...)

Slide 44 of 70

---

---

---

---

---

---

---

---

### Pre-existing M184V Prior to Switch to INSTI Regimen: 4030

	Participants with Baseline M184V/I n=81	HIV-1 RNA <50 c/ml at Week 12 IDMC (Blinded)
M184V/I alone	26% (21/81)	95% (20/21)*
M184V/I + ≥ 1 substitution		(59/60)*
M184V/I + NNRTI-R	51% (41/81)	98% (40/41)
M184V/I + other NRTI-R	51% (41/81)	98% (40/41)
M184V/I + TAMs	42% (34/81)	97% (33/34)
M184V/I + primary INSTI-R	6% (5/81)	100% (5/5)

Slide 45 of 70

R. Anasta, et al. CROI 2019 Abstr 655

79/ 81 (98 %) with Any M184V Suppressed

---

---

---

---

---

---

---

---

### Question

Does INSTI therapy cause weight gain?

Slide 46 of 70

---

---

---

---

---

---

---

---

### Case 7

- 47 year old woman starts on BIC/FTC/TAF 12 months ago from her original ARV regimen (TDF/FTC/DRV/r)
- Diagnosed 4 years ago
- **Initial:** HIV RNA 28,000 c/ml (Wildtype virus)  
CD4 count 450 cells/ul
- **Current:** HIV RNA <20 c/mL / CD4+ count 930 /uL
- Since starting her current regimen her weight has increased from **145 lbs to 171 lbs**

Slide 47 of 70

---

---

---

---

---

---

---

---

### ARS 10: At this point you would...

- Keep her on her current Rx (TAF/FTC/BIC)
- Switch her to TDF/ FTC (fdc) / DRV/r
- Switch her to TAF/ FTC / DRV/c (fdc)
- Switch her to TDF / FTC / RPV (fdc)
- Switch her to DTG / RLP (fdc)
- Switch her to TAF / FTC / ATV/c
- Some other option

Slide 48 of 70

---

---

---

---

---

---

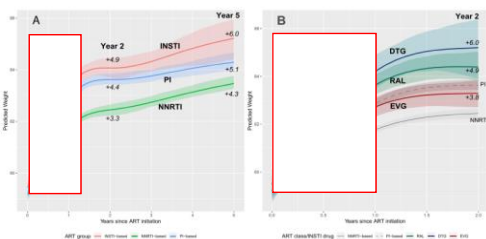

---

---

### Change in Weight Overtime – NA-ACCORD

Bourgi et al CROI 2019

INSTI distribution: 4,740 Total; 1,681 (35%) RAL; 2,124 (45%) EVG; 935 (20%) DTG

Slide 49

---

---

---

---

---

---

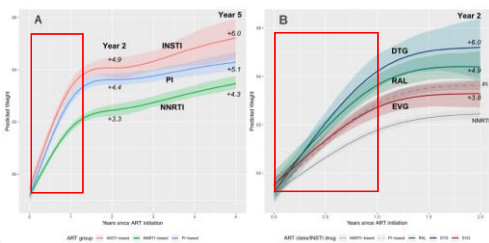

---

---

## Change in Weight Overtime – NA-ACCORD

Bourgi et al CROI 2019

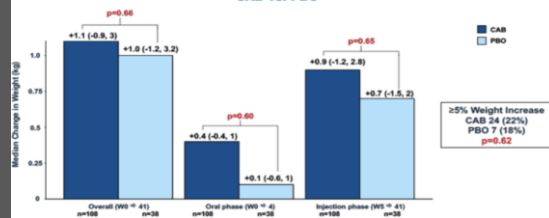

INSTI distribution: 4,740 Total; 1,681 (36%) RAL; 2,124 (45%) EVG; 935 (20%) DTG

Slide 50

## Cabotegravir vs Placebo for PrEP

### Primary Outcome: Changes in weight CAB vs. PBO

Landovitz, et al, Abstr 34 LB, CROI 2019

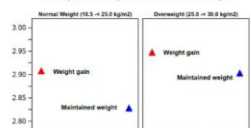

## CROI 2019: The Impact of Inflammation on Weight Gain Following Initiation of ART

- ART-naïve ACTG trials A5202 and A5257

- Higher pre-ART IL-6, sTNFαR2, IP-10, and sCD163 in those who gained weight over 96 weeks

- Sex difference: women who gained weight had smaller declines in biomarkers compared to men

### Adjusted pre-ART soluble CD136 levels in patients who gained weight vs. maintained weight

Does higher BMI promote inflammation in PLWH, or does inflammation promote weight gain?

Barron, SH, et al. CROI 2019, Poster 073

### Question

What should I use for PrEP Rx?

Slide 53 of 70

---

---

---

---

---

---

---

### Case 8

- 45 yo Male makes an appointment to request PrEP
- He is single and has 1 – 4 different partners per month
- No significant PMHx
- No medications
- Labs are normal

Slide 54 of 70

---

---

---

---

---

---

---

### ARS 11: At this point you would prescribe:

- A. TDF / FTC (fdc) daily
- B. TDF / 3TC (fdc; generic) daily
- C. 2:1:1 (TDF/ FTC) PrEP (2 doses 12 hours prior to anticipated sexual activity...Then one dose daily for 2 days)
- D. Not prescribe PrEP

Slide 55 of 70

---

---

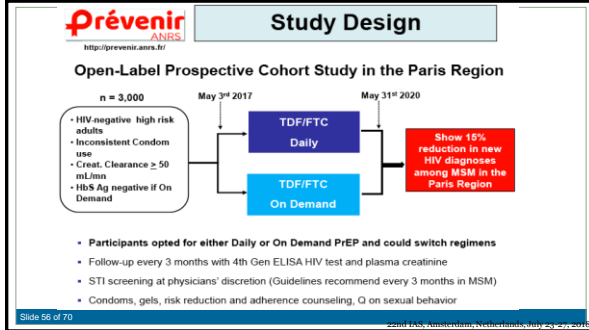

---

---

---

---

---

---

---

---

---

---

---

---

---

**Prévenir ANRS**

## HIV Incidence (mITT Analysis)

Treatment	Follow-Up Pts-years	HIV Incidence per 100 Pts-years (95% CI)
TDF/FTC (Daily)	443	0 (0-0.8)
TDF/FTC (On Demand)	506	0 (0-0.7)

Mean Follow-up in this Open-Label Cohort: 7 months (SD: 4)

Incidence of study discontinuation:  
3.3/100 PY including 1.5/100 PY who discontinued PrEP

85 HIV-infections averted\*

\* assuming an incidence of 9.17/100 PY as observed in the ANRS Ipergay study in Paris

anRS

Slide 57 of 70

---

---

---

---

---

---

---

---

## Considerations of 2-1-1 vs Daily PrEP

	2-1-1 PrEP	Daily PrEP
Who can use it?	Only studied in MSM	Anyone
Chronic HBV	Can trigger a flair	Can be safely used
Planning	Need to plan sex at least 2hrs in advance	No planning needed
"Forgiveness"	Not forgiving of missed doses	Forgiving of missed doses during the week

Slide 58 of 70

---

---

---

---

---

---

---

---

### Question

Should I simplify an “older” complex regimen?

Slide 59 of 70

---

---

---

---

---

---

---

### Case 9

- 57 year old man transfers to your care; no prior resistance tests are available
- He diagnosed with HIV in 2001; prior opportunistic infections and complains of ‘Pill Fatigue’
- Has taken most existing antiretroviral drugs available; no exposure to DTG, ELV, or BIC
- Currently on TDF / FTC / ETV / DRV-r /Ral (twice daily)
- CD4+ count 430 /uL (nadir CD4 = 6)
  - HIV RNA <20 c/mL (max VL 667,000)

Slide 60 of 70

---

---

---

---

---

---

---

### ARS 12: At this point which regimen would you choose?

- A. Continue current therapy (7 pills)
- B. Switch to TAF / FTC/ ELV / c (fdc) /DRV (2 pills)
- C. Switch to ABC/ 3TC / DTG (fdc) / DRV/c (2 pills)
- D. Switch to TAF / FTC / RAL / DRV/c (4 pills)
- E. Switch to TAF / FTC / DTG / DRV/c (3 pills)
- F. Switch to TAF/FTC/BIC (1 Pill)
- G. Switch to TAF / FTC / DTG (2 pills)
- H. Some other regimen

Slide 61 of 70

---

---

---

---

---

---

---

### Question

What regimen should I start when a patient returns after a long absence?

Slide 62 of 70

---

---

---

---

---

---

---

### Case 10

- 55 yo male returns after being "Lost to Follow Up" for 2 years
- Diagnosed 7 years ago with HIV infection
- Initial Rx: **TDF /FTC / RPV** (Tolerated well)
- **Initial:** HIV RNA 86,000 c/ml (wildtype virus)  
CD4 count 70 cells/ul
- **Status at last visit (2 years ago):**  
HIV RNA 26 c/ml / CD4 count 325 cells/ul
- Now returns and wants to re-engage in care
- Lab results pending

Slide 63 of 70

---

---

---

---

---

---

---

### ARS 13: What ARV therapy should you use now?

- A. Same regimen as originally on
- B. Start an InSTI-based regimen
- C. Start a PI-based regimen
- D. Wait for repeat resistance test, then choose regimen based on results
- E. Some other answer

Slide 64 of 70

---

---

---

---

---

---

---

### Question

Should I stop abacavir in older patients?

Slide 65 of 70

---

---

---

---

---

---

---

### Case 11

- 62 yo male started on ARV Rx years ago (resistance history: wild type virus) **returns to you for care after 4 years** (Rx'd elsewhere)
- Has been through several regimens; now on ABC/ 3TC / DTG (fdc)
- **Now:** HIV RNA < 20 c/ml (persistently)  
CD4 560 cells/ul  
Cholesterol 180 mg/dl (HDL 52 / LDL 100)  
Creat 1.3 / eCrCl = 80 cc/min
- Smoker
- PMHx negative (No cardiac history)
- On atorvastatin and daily low-dose ASA

Slide 66 of 70

---

---

---

---

---

---

---

### ARS 14: Besides asking him to quit smoking, what would you do?

- A. Continue his current ARV Rx
- B. Change his ABC/3TC to TAF / FTC containing Rx
- C. Change his ABC/3TC to DRV/rit (continue DTG)
- D. Some other option

Slide 67 of 70

---

---

---

---

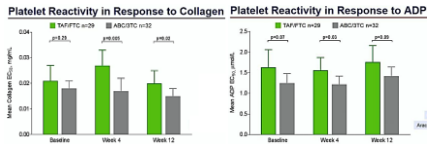

---

---

---

### ABC → TAF – Effect on Platelets

- 61pts on ABC/3TC containing regimen randomized to continue or to switch to TAF/FTC. Platelet aggregation measured by platelet reactivity

- Switch to TAF/FTC resulted in less reactivity of platelets by collagen assay
- Does this explain possible CV risk associated with ABC? In the Framingham study ADP response was much more predictive for CVD than collagen response (MK Pourouzan, JAMA 2018)

Slide 68 of 70

Mallon #677LB  
Trial funded by Gilead Sciences, Inc

### Conclusions

- ARV therapy should be initiated with an InSTI-based regimen (unless otherwise indicated), as close to time of Dx as possible
- Do not change Rx in setting of low-level viremia
- Use DTG, BIC, TAF and Cobi cautiously in women who are contemplating pregnancy
- M184V mutation does not have much impact on InSTI based Rx
- Weight gain is associated with initiation of ARV Rx, with more weight gain observed in InSTI regimens
- Standard PrEP is daily TDF/FTC, though newer approaches are being developed, including 2:1:1 episodic treatment

Slide 69 of 70

## Question-and-Answer

IAS-USA
