Learning Objectives

After attending this presentation, learners will be able to:

- Describe how mRNA vaccines induce immune responses
- List the benefits of mRNA technology for rapid vaccine development
- Describe the rapid but safe development of COVID-19 vaccines
- Contrast the rapidity of COVID-19 vaccine development with the inability to develop an HIV vaccine

## mRNA to be used for other vaccines

**SARS-CoV-2**

- Moderna**: mRNA-1273
- Pfizer**: BNT162b2
- AstraZeneca**: AZD1222
- Novavax**: NVX-CoV2373
- Johnson & Johnson**: Ad26.COV2.S
- Sanofi/Regeneron**: R567
- Moderna**: mRNA-1879
- Pfizer**: BNT162b1
- AstraZeneca**: AZD1222
- Novavax**: NVX-CoV2373
- Johnson & Johnson**: Ad26.COV2.S
- Sanofi/Regeneron**: R567

**Influenza virus**

- Moderna**: mRNA-1273
- Pfizer**: BNT162b2
- AstraZeneca**: AZD1222
- Novavax**: NVX-CoV2373
- Johnson & Johnson**: Ad26.COV2.S
- Sanofi/Regeneron**: R567

**HIV**

- Moderna**: mRNA-1273
- Pfizer**: BNT162b2
- AstraZeneca**: AZD1222
- Novavax**: NVX-CoV2373
- Johnson & Johnson**: Ad26.COV2.S
- Sanofi/Regeneron**: R567

**Rabies virus**

- Moderna**: mRNA-1273
- Pfizer**: BNT162b2
- AstraZeneca**: AZD1222
- Novavax**: NVX-CoV2373
- Johnson & Johnson**: Ad26.COV2.S
- Sanofi/Regeneron**: R567

**Ebola virus**

- Moderna**: mRNA-1273
- Pfizer**: BNT162b2
- AstraZeneca**: AZD1222
- Novavax**: NVX-CoV2373
- Johnson & Johnson**: Ad26.COV2.S
- Sanofi/Regeneron**: R567

**Polio virus**

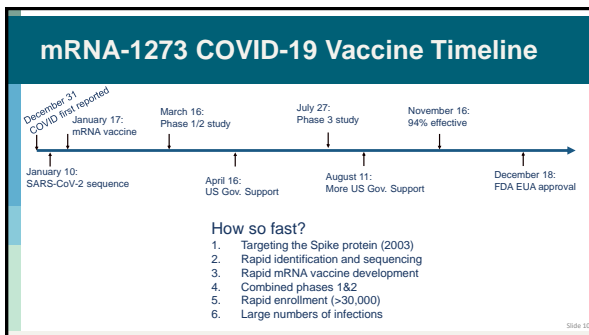

- Moderna**: mRNA-1273
- Pfizer**: BNT162b2
- AstraZeneca**: AZD1222
- Novavax**: NVX-CoV2373
- Johnson & Johnson**: Ad26.COV2.S
- Sanofi/Regeneron**: R567

COVID-19 Vaccines in U.S. Government Development Portfolio				
Platform	Immunogen	Developer	Status	
Nucleic Acid (mRNA)	S2P	Moderna	■ BLA (Age 18+); EUA (Age 6 mo-17)	
	S2P	BioNTech SE/Pfizer Inc.	■ BLA (Age 16+); EUA (Age 6 mo-15)	
Adenovirus Vector	S2P	Johnson & Johnson	■ EUA (Age 18+)	
	Wild-type spike	AstraZeneca	■ EUA/BLA TBD	
Recombinant Protein and Adjuvant	S2P	GSK/Sanofi S.A.	■ EUA request 2/2022	
	S2P	Novavax, Inc.	■ EUA (Age 12+)

# Antibodies are the Primary Correlates of Vaccine Protection

A Venn diagram illustrating the overlap of Neutralizing Antibodies and Functional Antibodies for various diseases. The diagram consists of two overlapping circles. The left circle is labeled 'Neutralizing Antibodies' and the right circle is labeled 'Functional Antibodies'. The intersection of the two circles is labeled 'Both'. The diseases are listed within the circles and their intersection:

- Neutralizing Antibodies only:** JEV, Typhus, Rubella, Shingles, Influenza, Cholera, Chickenpox, Pneumococcal, Meningococcal.
- Both (Intersection):** Polio, Measles, Rabies, Diphtheria, Tetanus.
- Functional Antibodies only:** Smallpox, Hepatitis A, Hepatitis B, Hib polysaccharide, Hib conjugate, Mumps, Influenza.

Conclusions

- mRNA vaccine technology allows the rapid production of pathogen immunogens
- mRNA was essential in producing effective COVID-19 vaccines in record time
- HIV presents a much more formidable pathogen due to its broad genetic diversity
- An HIV vaccine must induce broadly neutralizing antibodies
- mRNA technology will assist with rapid HIV vaccine evaluation of promising immunogens
